Office Action Summary	Application No. 10/736,303	Applicant(s) UY ET AL.	
	Examiner Harry B. Tanner	Art Unit 3744	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art in view of Raleigh et al. It is taken to be admitted prior art that temperature controls for a pool or spa heater having external temperature regulating controller and first and second primary temperature limiting switches with 150 and 135 degree settings are conventional in view of pages 1-2 of the specification and page 5, lines 3-5 of the specification. Raleigh teaches providing a maximum temperature setpoint of 107 degrees in order to prevent physical injury to a swimming pool or spa user (see col. 6, lines 30-37). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the admitted prior art system such that it included the use of temperature limiting control switch that provides a maximum temperature setpoint of 107 degrees in order to prevent physical injury to a swimming pool or spa user in view of the teachings of Raleigh. The difference between the 107 degrees of Raleigh and the 106 degrees as recited in claims 3 and 6 is considered to be substantially the same with regard to the safety of the user.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art in view of Raleigh et al as applied to claim 1 above, and further in view of Cline et al. Cline teaches the use of an on/off switch 350 in order to disconnect the pool heating system from line voltage (see col. 15, line 66 to col. 16, line 21). It would

have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the admitted prior art system such that it included the use of an on/off switch in order to disconnect the pool heating system from line voltage in view of the teachings of Cline.
